QUADRASTEP[®]

SYSTEM[®]

Prefabricated Custom To Foot Type Orthotics

The **QUADRASTEP[®] SYSTEM** is based on a clinical assessment algorithm which identifies and differentiates the structural and functional aspects of the foot into 6 specific foot "types". Each foot type influences not only the patients gait but the conditions and pathologies which may affect them throughout their lives.

WHAT MAKES QUADRASTEP[®] ORTHOSES UNIQUE?

QUADRASTEP[®] orthoses are manufactured from an injection molded thermoplastic compound which has a unique combination of strength with a "soft-edge" feel which gives incredible support while maintaining high patient comfort and therefore improving patient compliance. The devices are a single piece incorporating all of the required postings, recesses and heel cup/sidewall heights to effectively treat the specific foot type diagnosed requiring no additional adjustments.

CHOOSE A QUAD FOR MORE INFORMATION

NEW** All **QUADRASTEP[®]** orthotics are available in regular or narrow widths and topcovers can be added for an extra charge!
